COMPOST PRODUCTION

INVEST IN THE SOIL

Join us in fueling the transformation of the agricultural sector

The shift towards sustainable agricultural practices has fueled a growing demand for compost, known as nature's black gold, due to its ability to revitalize soil health and improve crop yields. As more farmers recognize the value of compost in promoting sustainable farming, Compost Baladi is thrilled to be a supportive ally on their journey into the world of compost production. Whether farmers seek to enhance their own farming needs or explore a lucrative opportunity to generate additional revenue by selling compost, Compost Baladi offers expertise, support, and tailored solutions to ensure success. Together, we aim to pave the way towards a prosperous, greener, and thriving future for sustainable agriculture.

Why get into composting

Resource Optimization: Commercial composting operations can optimize the use of on-site resources, including farm equipment, non-arable plots, and utilities. This efficiency leads to cost savings and improved overall farm management.

Income Diversification: Integrating compost production as a commercial venture offers farmers an additional revenue stream. Selling high-quality compost to other farmers, landscapers, or markets can bolster income and financial stability.

Resilience: By enriching the soil with organic matter, nutrients, and beneficial microorganisms, composting enhances soil fertility, nutrient availability, and structure, leading to healthier plants and sustained yields. On-farm composting optimizes farm efficiency through recycling crop waste and reduce irrigation needs through improved soil water-holding capacity.

Is composting the right choice for you

Land Zone and Permitting: land is compliant and capable of securing the necessary permits for composting operations.

Organic Waste Generators: significant sources of organic waste nearby, such as livestock farms, agro industries, or commercial farms

Developed Property: leveled land, access to water, electricity, fencing, and road access

Investment Capacity: with an anticipated 2 to 3 year return on investment period.

Why get into composting?

We offer a comprehensive range of services to support your composting journey. From conducting feasibility studies to determine the viability of your project, to manufacturing and supplying composting equipment tailored to your needs, we provide end-to-end solutions. Our expert team guides you through commissioning and management, ensuring smooth operations and efficiency. We also offer a unique compost buy-back option, guaranteeing the sale of your end product through our established markets. With our support, you can focus on compost production and contribute to the regeneration of the agricultural sector.

Get Started:

- Initial Meeting: CB meets with the landowner to understand their compost production and investment goals.
- Questionnaire and Viability Assessment: CB provides a questionnaire to assess the feasibility of the compost operation based on available inputs.
- Development of Offer: CB develops a tailored offer with recommended composting facilities and estimated costs.
- Commissioning the Facility: CB sets up the composting facility and initiates operations.
- Monitoring and Support: CB monitors the production process, provides guidance, and offers operation management services.
- Buy-Back Guarantee Contract: CB offers a contract option to buy back the compost produced, ensuring a reliable revenue stream for the farmer.
